

SRS Agenda Items - general

- **Sharing of information**
- **Planning**
- **Coordination and prioritization of projects and experiments**

Prerequisites, Needs and other Issues

- A meaningful and successful participation in international space efforts must be based on a well-funded national programme
- The ESRO programme does not offer enough flight opportunities,
- There has to be a healthy sharing and understanding of responsibilities between researchers, engineers, decision makers, customers/buyers and implementing bodies
- How to deal with new scientific disciplines that want to get engaged in space activities
- The "normal" research council can handle neither the funding nor the long-term planning of space efforts
- The programme planning and funding must be able to handle:
 - long time-scales,
 - risks,
 - participation by both big and small research groups,
